

Problems with Bluetooth connect in cars

Escrito por crowek - 22/06/2018 14:03

Hello,

I am a very happy user of Neutron since a longer while and like the sound quality and all the features. A few months ago, I have upgraded my S5 to LinageOS 7.1.2. All-in-all a very good improvement of the OS experience. However since about that time, I am having problems when I use my s5 together with Neutron in my (and other) cars. When a call comes in while I am using Neutron to listen to music, my phone gets stuck, continues to ring and I need to reboot my phone. This is not happening when I am using the stock app to listen to music.

Has anybody else experienced to same problem?

Please help.

I didn't find the right solution from the Internet.
