

Project-paid Scrp for buying cars

Escrito por crowek - 22/06/2018 12:04

Hello,

I have this problem with a website: On this website there is constantly new cars being added, with a buy now function. Unfortunately it seems I am much slower than the competition (who are probably also using scripts), since most good cars are sold within a minute. I already use a Imacro recording to do the refreshing for me, and in combination with the Mozilla Addon "check for change" I am getting a notice as soon as something new appears. The problem is that always scrolling through 99% of unwanted cars, takes me too much time. I would need to have a script, that searches for the car name in a certain row and clicks on them as soon as the script finds something has been added after refresh.

Please help.

I didn't find the right solution from the Internet.
