

Audi A4 2.0T Engine Failure

Escrito por jotat - 26/06/2018 11:14

Hello,

The car is a 2012 Audi A4 2.0T SE with only 39,600 km on the clock. The car has been fully serviced and the motor plan finished in May. I have searched the forum and seen some issues with oil leaks with these engines, but I cannot find any similar issues. Does anyone know if this is a common problem with these engines? Could it be caused by the oil leak issue? It seems to me that such a catastrophic engine failure on an engine with such low mileage, would be a manufacturing fault and therefore would be something a responsible manufacturer would take of but as it is out of the maintenance plan it seems that the Audi will not assist.

Any help will be appreciated.

I didn't find the right solution from the Internet.
