housing reflection issue

Escrito por crowek - 22/06/2018 11:59

Hello,

I've bought a my old Ixus 75 a Canon underwater housing (WP-DC14). I'm mainly into snorkeling by now. So far i'm prett happy with the housing except that i most of the time the housing is reflecting a lot and its really hard to see anything on the display. Any ideas how to solve this issue? I was already thinking about getting some black tape and build some kind of hood around it.

Please help.

I didn't find the right solution from the Internet.
